

Cows already treated will already have red leg bands, an antibiotic sign and identified on the milk cart.

- 5.1.3 Prepare the cow for milking. Refer to SOP [DC-605 Preparing Cow for Milking](#).
 - 5.1.4 Milk into a pail. Refer to SOP [DC-612 Milking Antibiotic Treated Cows](#).
 - 5.1.5 When the milker is removed, ensure that all quarters are empty, especially the quarter (s) that will be treated (strip by hand if necessary).
 - 5.1.6 Do not post-dip the cow before treating it with an intra-mammary infusion.
- 5.2 Treatment:
- 5.2.1 Wear clean gloves.
 - 5.2.2 Tie the tail to the overhead bar to prevent contamination of the teat or the intra-mammary infusion syringe.
 - 5.2.3 Clean the end of the teat very carefully to remove all traces of teat dip.
 - 5.2.4 Disinfect the end of the teat using an alcohol swab.
